

## From JUNE: TRT Remeex VARITENSOR™

# Lifetime

### Flexibility to readjust

#### Quality in design

The TRT Varitensor System is the only long term readjustable sling for Female SUI. This prosthesis allows a reliable readjustment of the sling urethral support whenever needed during patient's lifetime. Surgeon can provide a long-term continence, and avoid re-operating again a patient with a sling failure.

#### 5 Year Follow Up

With more than 5 years follow-up, TRT provides surgeon with the experience of adjusting the sling urethral support with the patient in standing up position and doing the efforts that drives her to incontinence. This unique property provides the surgeon the ability to adjust the sling to the desired urethral support level, avoiding urine leakage and urine retention. The Varitensor also provides long term continence in cases where other systems don't.

- **PATIENTS:** Designed for life long adjustability to treat female incontinence.
- **SAFETY:** Single use implant. Manufactured in Spain. CE marked. Single packed.
- **GAMECHANGER:** Adjustability post procedure in upright position gives the perfect tension for each individual patient.
- **EFFICACY:** The only product on the market that allows for tightening and release of the fascia sling days, months and years post procedure.
- **READ MORE:** Images and videos on [www.JUNEMEDICAL.CO.UK/products](http://www.JUNEMEDICAL.CO.UK/products)

#### Dynamic pressure transmission system

When coughing, the patient advances the rectus muscle, advancing the varitensor, and increasing the sling urethral support while it's needed. This reconstructs the intra abdominal pressure transmission system of normal continent patients. The readjustment is made while the patient is standing up and doing the efforts that cause incontinence.

#### Lifetime readjustability

The sling adjustment is made step by step (checking continence every four turns of the manipulator). When the patient is continent we know that four turns before she was incontinent. This allows the surgeon to provide the minimum necessary urethral support for that particular patient under stress and no more, thus reducing retention risks.

#### KNOWLEDGE AND SKILL

We have **been chosen** to supply over 50 trusts in the UK, and we hope we can be of service to you as well. **We will do our best.**

#### ONLY WOMEN'S HEALTH

We are the **first and only** company in the UK whose sole focus is on women's health. It is all we do, and nothing distracts us.

#### CLOSE AND CAPABLE

We are **appreciated** as a supplier because we have staff and emergency stock in 6 locations throughout the country. We have prevented many cancellations of surgeries by hand delivering product in emergency situations.

#### ENVIRONMENT

We are mindful about our impact, and will try to travel smart. We reuse our shipping boxes (our Ugly and Proud campaign!) and we do what we can to preserve our planet while fulfilling our obligations to our customers. Our full policy is published on our website.

#### TECHNICAL SUPPORT

Our team is extremely **knowledgeable**: we employ engineers, midwives, nurses and scientists: we are always at hand to answer any questions.

#### ZERO WAIT

Sometimes your equipment needs a **repair**: we will get you a replacement machine and fix yours in no-time. Need an answer to a **question**? We will get back to you within 24h.

#### CHARITY

Our focus for charity is curing obstetric fistula. Read more here: [www.fistulafoundation.com](http://www.fistulafoundation.com) and on our website.

#### MADE IN BRITAIN

Proudly British, we are headquartered in the South East, close to major airports and motorways. We strive to **innovate and produce** in the UK and we work closely with the NHS, KTN, ASHN and DIT to bring only the best medical devices to our customers.

For more information on any of our products or policies please visit [www.junemedical.co.uk](http://www.junemedical.co.uk)

## Further details

Varitensor implant

#### How does it work?

A sling of the surgeons/patients choice is placed under the urethra and the device is implanted above the pubic bone. As the Varitensor adjusts the lift under the urethra, the flow of urine is interrupted and the patient remains continent. If a patient becomes incontinent again due to changes in her anatomy as she ages, continence is restored by reconnecting the manipulator and applying additional turns to the manipulator.

#### What is the long term follow up?

The TRT Reemex Varitensor has been successfully implanted since 1992 with excellent results.

#### What is the UK experience?

In October 2018, Birmingham Womens adjusted a female patient over 10 years after her original implant.

#### Remeex® Flexibility to readjust

- The Remeex system allows for readjustment of urethral support whenever needed with a very simple procedure
- Adjust the sling months or even years post-op to treat recurrence of symptoms
