

From JUNE: GALAXY II

KNOWLEDGE AND SKILL

We have **been chosen** to supply over 50 trusts in the UK, and we hope we can be of service to you as well. **We will do our best.**

ONLY WOMEN'S HEALTH

We are the **first and only** company in the UK whose sole focus is on women's health. It is all we do, and nothing distracts us.

CLOSE AND CAPABLE

We are **appreciated** as a supplier because we have staff and emergency stock in 6 locations throughout the country. We have prevented many cancellations of surgeries by hand delivering product in emergency situations.

ENVIRONMENT

We are mindful about our impact, and will try to travel smart. We reuse our shipping boxes (our Ugly and Proud campaign!) and we do what we can to preserve our planet whilst fulfilling our obligations to our customers. Our full policy is published on our website.

In control of the surgical field

Galaxy II is suitable for any procedure where you want to have optimal control over the surgical field, with an unobstructed view. The **8 stays in the pack** are there to help you quickly apply and readjust tension to keep the operating site clear for you to do your job.

Square or Snowman?

Gynaecologists and urologists tend to use Snowman, and colorectal, orthopaedics and ENT tend to use Square, but there are no rules. Both designs have **our design protected camlocks**, allowing for simple one handed adjustment during the procedure. No more screws that come undone, fall on the floor or break off!

- **QUALITY:** Galaxy is the perfect assistant: strong, dependable, stays where you put it and doesn't move.
- **ENVIRONMENT:** 10% reduction in plastic waste. Manufactured fully in Britain. Minimal shipping. Single use. CE marked.
- **OPTIONS:** Two shapes, three different types of stay hooks. Each retractor has 8 stays packed with it, and you get a catheter clip as well.
- **SAFETY:** Single use, no contamination risks.
- **READ MORE:** Images and videos on www.JUNEMEDICAL.CO.UK/products

Our stays

We have chosen to make three different stays:

- **Sharp 5mm**
- **Blunt 5mm**
- **Blunt 12mm**

They are all the same length, but are useful for different types of tissue. They are tensile tested up to 20 newton, to ensure they can carry a load much higher than needed for your procedures.

Your choices

What shape and what sharpness of stay is very much a personal preference, and we continue to expand on the range each quarter. Solid manufacturing, no product gapping or clicking, you will feel in complete control of the procedure.

A range of silicone stays (latex free) are available, including:

Further details

British made, AND at less cost

The most common product when we started was the old Lonestar, an American product. Our goal was to make a better designed device, with less environmental impact and at a lower unit cost for the NHS. It was important for us to produce in the UK, so Galaxy II is manufactured in Brighton.

Less plastic waste, meeting the waste reduction goal

Thanks to the smart design of the retractor ring, we have removed 10% of the plastic material and Galaxy II is meeting the waste reduction target for the NHS (-10%).

GALAXY help women; our charity plea

We have donated Galaxy retractors to the Fistula Foundation and Direct Relief for several years. We will continue to do what we can to help those who most need our support.
